

CFEH Facebook Case #93

A 65 year old Asian male presented for examination. Below are the Optomap and Fundus Autofluorescence images for his left eye. This case is a good illustration of the value of different imaging modalities. The Optomap image clearly shows asteroid hyalosis while the fundus autofluorescence image highlights the grouped CHRPE (bear tracks). CFEH provides advanced eye imaging and visual system diagnostic services with no expense to patients for both anterior and posterior eye conditions.
